

INTRODUCTORY LESSON

AI ASSISTED DEVELOPMENTS

TARGET AUDIENCE

PRIMARY GROUPS

Innowise Developers & DevOps. Valuable for BAs, PMs, and Delivery Managers seeking technical leverage.

AI/ML DEPARTMENT

Not in target audience. Why? You are the architects of these systems—you already know what we are learning.

THE FUNDAMENTAL QUESTION

**WHY DO WE
NEED IT?**

THE AI MULTIPLIER

SKILLS IN HIGH DEMAND

AI skills are no longer optional. If you are a strong developer, AI assistance makes you **even stronger**.

For beginners, AI acts as a **hyper-accelerator**, flattening the learning curve and shortening the path to mastery.

LEARNING PATHWAY

MODERN TOOLSET

Mastering the 2026
landscape of agents and CLI
environments.

ADVANCED PATTERNS

From context engineering to
multi-agent background
orchestration.

APPLIED PRACTICE

Building and deploying
real-world prototypes
single-handedly.

TOOLSET (JUN 2026)

RECOMMENDED CHOICE

OpenAI Codex & Anthropic Claude Code offer the best price-to-quality ratio in the current market.

- Elite multi-file reasoning capabilities
 - Integrated agentic execution loops
 - **Strategy:** Avoid vendor lock-in. Be aware of the wider ecosystem to stay agile.
-

PRACTICES & FRAMEWORKS

- **Meta-Prompting:** Designing prompts that instruct the AI on how to prompt itself or its sub-agents.
- **Context Engineering:** Architecting the precise information ecosystem (files, state, history) the model needs to succeed.
- **Spec-Driven Development:** Shifting the focus from writing lines of code to defining comprehensive, machine-readable specifications.

BEYOND THE BASICS

MULTI-AGENT MESH

Orchestrating specialized background agents for testing, security, and refactoring.

OPEN SOURCE

Leveraging local models and open harnesses like OpenCode for privacy and control.

CUSTOM HARNESS

Building your own specialized interfaces and agent protocols for niche workflows.

APPLIED PRACTICES

- **Pet Projects:** Rapidly prototyping experimental ideas from scratch.
- **Self-Healing CI/CD:** Agents that automatically fix build failures and dependency conflicts.
- **Cloud Prototyping:** Deploying complex architectures to production with minimal manual config.
- **Single-Handed Delivery:** Delivering fullstack products as a solo developer-orchestrator.

THE OPPORTUNITY

2X

PROJECT CAPACITY

FINANCIAL & PROFESSIONAL GROWTH

Efficiency gains allow for taking on a **second project** without burning out. This translates directly to:

- Substantially increased monthly income
- Diverse professional experience across domains
- Elite market positioning in the 2026 economy

**THANKS
FOR
WATCHING**

See you in the next lesson.
